surface science

MASTER INDEX

A journal devoted to the physics and chemistry of interfaces

Editor:
Charles B. Duke, Webster, NY

Regional Editors:
George Comsa, Germany; Shinji Kawaji, Japan; Richard M. Lambert, UK

Master Index to Volumes 301–310

SUSCA MI 301–310, 1–166 (1994)

North-Holland

FOUNDING EDITOR: Harry C. Gatos

ADVISORY EDITORIAL BOARD

EDITORIAL ADDRESSES:

Editor:

Dr. Charles B. Duke, Xerox Webster Research Center, 800 Phillips Road, Bldg. 0114-38D, Webster, NY 14580, USA
Telefax: +1-716-265-5080; Electronic mail: warthman.wbst128@xerox.com

Regional Editors:

Professor George Comsa, Institut für Grenzflächenforschung und Vakuumphysik, KFA Jülich, D-52425 Jülich, Germany
Telefax: +49-2461-58627

Professor Shinji Kawaji, Department of Physics, Gakushuin University, 1-5-1 Mejiro, Toshima-Ku, Tokyo 171, Japan
Telefax: +81-3-5391-1513

Dr. Richard M. Lambert, Department of Chemistry, University of Cambridge, Lensfield Road, Cambridge CB2 1EW, UK
Telefax: +44-223-336362; Electronic mail: rml1@cus.cam.ac.uk

All correspondence with the publisher regarding manuscripts accepted for publication should be addressed to:
Surface Science Technical Editors, P.O. Box 103, 1000 AC Amsterdam, The Netherlands
Telephone: +31-20-5862 526; Telefax: +31-20-5862 775; Electronic mail: hanraads@elsevier.nl

Please do not use telefax for the transmission of manuscripts.

Detailed information on submission and preparation of manuscripts may be found in the Requirements for swift publication on page 3 of the cover.

Surface Science (including Surface Science Letters) (ISSN 0039-6028). For 1994, volumes 296–318 are scheduled for publication. Subscription prices are available upon request from the publisher. A combined subscription to Surface Science volumes 296–318, Applied Surface Science volumes 72–81, and Surface Science Reports volumes 18–20 is available at a reduced rate.
Subscriptions are accepted on a prepaid basis only and are entered on a calendar year basis. Issues are sent by surface mail except to the following countries where air delivery via SAL is ensured: Argentina, Australia, Brazil, Canada, China, Hong Kong, India, Israel, Japan, Malaysia, Mexico, New Zealand, Pakistan, Singapore, South Africa, South Korea, Taiwan, Thailand, USA. For all other countries airmail rates are available upon request.
Please address all your requests regarding orders and subscription queries to: Elsevier Science, Journal Department, P.O. Box 211, 1000 AE Amsterdam, The Netherlands. Telephone: +31-20-5803642, Telefax: +31-20-5803598. Claims for issues not received should be made within six months of our publication (mailing) date.
Books for review should be sent to Dr. C.B. Duke.

Elsevier Science B.V. All rights reserved. No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the written permission of the publisher, Elsevier Science B.V., Copyright & Permissions Department, P.O. Box 521, 1000 AM Amsterdam, The Netherlands.
Special regulations for authors – Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.
Special regulations for readers in the USA – This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 27 Congress Street, Salem, MA 01970, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. The fee indicated on the first page of an article in this issue will apply retroactively to all articles published in the journal, regardless of the year of publication. This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

US mailing notice – Surface Science (including Surface Science Letters) (ISSN 0039-6028) is published three times per month by Elsevier Science, Molenwerf 1, P.O. Box 211, 1000 AE Amsterdam, The Netherlands. The annual subscription price in the USA is US$ 6104 (valid in North, Central and South America only), including air speed delivery. Second class postage paid at Jamaica, NY 11431.
USA POSTMASTERS: Send address changes to Surface Science, Publications Expediting, Inc., 200 Meacham Avenue, Elmont, NY 11003. Airfreight and mailing in the USA by Publications Expediting.

Materials Science Monographs, Volume 80

Structure and Properties of Ceramics

Edited by **A. Koller**

1994 586 pages Price: Dfl. 375.00 (US$214.25) ISBN 0-444-98719-3

Co-edited with and distributed in the East European countries by Informatorium,

Modern ceramic materials differ from the traditional materials which were only based on natural substances. It is now possible to prepare ceramics using a wide range of properties and as an area this field has evolved as a very broad scientific and technical field in its own right. In practice one encounters ceramics in practically all branches of materials science and the characteristics are so wide ranging that the common basis of these substances is not always immediately apparent. All ceramic materials are prepared by ceramic technology, and powder substances are used as the initial raw materials. Their physical properties are an expression not only of their composition, but primarily of their structure. Thus in order to fully understand the properties of ceramics, a knowledge of their structure is essential. This book is intended as a source of such knowledge. All the chapters are written by authors with vast experience in the various fields of ceramics who provide a detailed description of the interrelationships between the structure and behaviour of ceramic materials.

Contents: 1. Introduction *(A. Koller).*
2. Thermodynamics and ceramic systems *(P. Holba).*
3. The formation of ceramic body *(A. Koller).*
4. Methods for studying the structure of ceramics *(S. Civiš, I. Sanc).*
5. Symmetry and crystallography *(V. Kopsk).*
6. Crystal structure *(V. Kopsk).*
7. The glass phase *(I. Fanderlik).*
8. The effect of structure on the mechanical properties of ceramics *(F. Kroupa).*
9. The effect of the structure on the electric properties of ceramics *(A. Kubov).*
10. Structure and magnetic properties of ferrites *(E. Pollert).*
11. Structure and thermal properties of ceramics *(A. Koller).*

European Materials Research Society Symposia Proceedings,
Volume 40

Semiconductor Materials for Optoelectronics and LTMBE Materials

Proceedings of Symposium A and Symposium B of the 1993 E-MRS Spring Conference, Strasbourg, France, 4-7 November 1993

Edited by **J.P. Hirtz, C. Whitehouse, H.P. Meier, H.J. von Bardeleben** and **M.O. Manasreh**

1993 368 pages Price: Dfl. 300.00 (US$171.50) ISBN 0-444-81769-7

These three day symposia were designed to provide a link between specialists from university or industry who work in different fields of semiconductor optoelectronics.
Symposium A dealt with topics including: epitaxial growth of III-V, II-VI, IV-VI, Si-based structures; selective-area, localized and non-planar epitaxy, shadow-mask epitaxy; bulk and new optoelectronic materials; polymers for optoelectronics.

Symposium B dealt with III-V epitaxial layers grown by low temperature molecular beam epitaxy, a subject which has undergone rapid development in the last three years.

Contents: Part I: Symposium A on Semiconductor Materials for Optoelectronic Devices, OEICs and Photonics. Preface. Epitaxy for optoelectronic applications. Quantum size structures. Optoelectronic devices. Strained and mismatched structures. Interdiffusion and ion implantation. New devices and integration of devices. Optoelectronics on silicon. Bulk III-V crystals and new optoelectronic materials. Author index. Subject index.

Part II: Symposium B on Low Temperature Molecular Beam Epitaxial III-V Materials: Physics and Applications. Invited papers: LTMBE GaAs: present status and perspectives *(G.L. Witt)*. Point defects in III-V materials grown by molecular beam epitaxy at low temperature *(P. Hautojärvi et al.)*. GaAs, AlGaAs and InGaAs epilayers containing As clusters: semimetal/semiconductor composites *(M.R. Melloch et al.)*. Extended defects and precipitates in LT-GaAs, LT-InAlAs and LT-InP *(A. Claverie, Z. Liliental-Weber)*. Optoelectronic applications of LTMBE III-V materials *(J.F. Whitaker)*. Applications of GaAs grown at a low temperature by molecular beam epitaxy *(U.K. Mishra)*.

REQUIREMENTS FOR SWIFT PUBLICATION

Submission: *Contributions* must be written in English. **They should be submitted in triplicate with original drawings of the figures** (no larger than ca. 20×30 cm) and an abstract in English. All manuscripts, other than Letters, originating in Germany and Austria, should be submitted to the Regional Editor in Germany. All manuscripts, other than Letters, originating in European Countries, other than those mentioned above, as well as those originating in Africa, should be submitted to the Regional Editor in the UK. All manuscripts, other than Letters, originating in Japan, should be submitted to the Regional Editor in Japan. All manuscripts originating in North and South America, in Asia (except Japan), in Australia or New Zealand, should be submitted to the Editor.
All Surface Science Letters regardless of country of origin, should be submitted directly to the Editor.

Refereeing: *The authors are encouraged to list the names (addresses and telephone numbers) of three to four individuals who are qualified to serve as referees for their paper.* The proposed referees should preferably reside in the same country or continent as the Editor or Regional Editor to whom the paper is submitted. The referees selected will not necessarily be from the list suggested by the author. Failure to provide complete data on several suggested referees may delay processing of the manuscript.

Copyright transfer: The submission of a paper will be taken to imply that the author has satisfied himself that no copyright will thereby be infringed. Upon acceptance of an article by this journal the author(s) will be asked to transfer copyright of the article to the Publisher. This transfer will ensure the widest possible dissemination of information.

Publication speed: To qualify for rapid publication in **Surface Science Letters** manuscripts should not exceed 2000 words in length, excluding abstract, list of references and a maximum of 5 tables or figures which will be counted as separate.

Preparation of manuscripts: The following are the stylistic requirements for a manuscript.

(1) *Manuscripts* should be typed throughout with double line spacing and wide margins on numbered pages.

(2) *Title page(s)* should contain, in addition to the article title, author(s)' names and affiliations, the text of related footnotes and the text of the abstract. Indicate which author will act as contact author and provide FAX No., telephone No. and telex No., if available. Failure to be able to contact the author by FAX can result in significant delays in processing the manuscript.

(3) *Tables* should be typed on separate sheets at the end of the manuscript. In addition to its serial number, each table should have a sufficiently detailed heading or caption to explain the data displayed in it.

(4) *Figures* should be numbered and their captions listed together at the end of the manuscript. Each figure should have a sufficiently detailed caption explaining the data displayed. A set of good quality drawings and photographs is required to produce the printed line figures and half-tone plates in the journal. Photographic copies ("glossy prints") of drawings are also acceptable for the line figures if they have been sharply focused and evenly exposed. **As a rule, Xerox copies cannot be accepted**. Original drawings and photographs will be returned after publication of the paper.

(4a) *Line figures*: The drawings or glossy prints supplied for the line figures should be 1.5–3 times larger than the printed size of the figures and should contain all the required, carefully applied lettering.
Figures are preferably reduced to a single column width (7.6 cm) unless their complexity, large width-to-height ratio, or need to display special detail makes a larger format necessary (max. printed width ~ 20 cm). Inappropriately sized lettering on a figure may prevent its reduction to the size optimum for its information content. The lettering used on a drawing should be chosen so that after reduction, the height of numbers and (capital) letters falls within the range 1.2–2.4 mm. Care should be exercised in choosing the pen width of machine-plotted graphs. Frequently lines in these figures are too fine compared to the area of the figure.
Shaded areas in line figures should be shown by means of cross-hatching (or a matrix of dots) rather than a continuous grey "wash". Cross-hatching, after reduction, of density less than ~ 25 lines/cm is satisfactory.

(4b) *Half-tone plates*: Photographs supplied for reproduction should be unmounted unless they form part of a composite figure and they should have a somewhat greater contrast than is desired in the printed figure. It is important that the photographs supplied are not screened (overprinted with the point-matrix used by printers) or moiré patterns will form when they are screened for a second time. When necessary, the top side of a photograph should be marked on the back. A reduction factor should be recommended for a photo when it is not obvious what detail in the photo is of interest.

(4c) *Colour plates*: Illustrations can be printed in colour when they are judged by the Editor to be essential to the presentation. The Publisher and the author will each bear part of the extra costs involved. Further information concerning colour illustrations and the costs to the author can be obtained from the Publisher.

(5) *References* in the text to other publications should be numbered consecutively within square brackets, for example: "... and Chang and Weaver [1] show ..." and listed together at the end of the text, for example:
[1] S.-C. Chang and M.J. Weaver, Surf. Sci. 241 (1991) 11.
[2] S.J. Hoekje and G.B. Hoflund, Appl. Surf. Sci. 47 (1991) 43.
[3] F.J. Himpsel, Surf. Sci. Rep. 12 (1990) 1.
[4] A. Roth, Vacuum Technology, 3rd ed. (North-Holland, Amsterdam, 1990).
[5] V. Celli, in: Dynamical Properties of Solids, Vol. 6, Eds. G.K. Horton and A.A. Maradudin (North-Holland, Amsterdam, 1990) p. 337.

References to unpublished or not readily accessible reports should be avoided. In the case of multiple authorship all authors should be listed in the references provided they number less than ten. Only in the case of more than ten authors is the first author et al. acceptable.

(6) *Formulae* in the manuscript should be typed with particular consideration given to characters that may be misinterpreted, e.g.

I (cap.), l (el), 1 (one), ′ (prime)	c, C; k, K, κ (kappa); p, P, ρ (rho)
o (lower case), O (cap.), 0 (zero), ° (deg)	u, v (lower case), ν (nu), V (cap.)
× (times), x (lower case), X (cap.)	Σ (sigma), Σ (sum), Π (pi), Π (product); etc.

If necessary, unusual symbols should be explained in pencil in the margin.

(7) *Vectors* should be indicated by a wavy underlining, and will be printed in bold-face italics.

Delay in publication might occur if the above requirements are not met.

Submission of electronic text: The final text may be submitted on a 3.5″ or 5.25″ diskette (*in addition to a hard copy with original figures*). Both double density and high density diskettes are acceptable, but they should be formatted according to their capacity before the files are copied onto them. The main text, list of reference, tables and figure legends should be stored in separate text files with clearly identifiable file names. The format of these files depends on the wordprocessor used. It is essential that the name and version of the wordprocessing program, type of computer on which the text was prepared, and format of the text files are clearly indicated. The final manuscript may contain parts (e.g., formulae, complex tables) or last minute corrections which are not included in the electronic text. This should be clearly marked in the additional hard copy.

Page charge and reprints: There is **no** page charge. Reprints may be ordered from the publisher. An order form will be sent to contributors together with the proofs. 50 reprints of the article will be supplied free of charge.
